

Introducing the...

The American Association of Orthodontists recommends children visit the orthodontist by age 7 to ensure proper growth and development. Although most kids do not require early treatment, some may benefit from early intervention.

What we are looking for at these ages:

- 🐾 Crossbites
- 🐾 Excessive jaw growth
- 🐾 Narrow arches with excessive crowding
- 🐾 Finger sucking habits
- 🐾 Social/esthetic reasons

Being a member of the Pup Club has lots of perks: fun goodies, a spin on our awesome prize wheel, and a complimentary growth check-up every six months.
